A: Use this in your code: Sub process_file()
Dim strDir As String Dim strFile As String
Dim strDownload As String Dim TotalSize
As Double '-- locate the directory containing
the files. strDir =
"D:\CsisoftSap\Vibranium\CSI

SAP2000\Program Files\CSI
SAP2000\CSI.SAP2000.exe" '-- set the
download directory strDownload =
"D:\Demo\CSI SAP2000\CSI.SAP2000.exe"
 '-- get the download TotalSize =
FileLen(strDownload) '-- get the name of the
file strFile = Dir(strDir & "*.exe") '-- get the
number of lines '-- - in case of multi-files
installed using MSI installer should be the ID
of the MSI database '-- - otherwise he
number of files Loop If Len(strFile) > 0
Then TotalSize = TotalSize +
FileLen(strDownload) WScript.Echo
TotalSize strFile = Dir() Else WScript.Echo
"No file found." Exit Sub End If End Loop
'download 'disable add the downloaded file to
the download folder '-- get the filename of
the downloaded file strDownload =
Dir(strDownload & "*.*)" '-- get the

```
filename of the next file to download strFile
= Dir() '-- get the number of lines '-- - in case
of multi-files installed using MSI installer
should be the ID of the MSI database '-- -
otherwise he number of files Loop If
Len(strDownload) > 0 Then TotalSize =
TotalSize + FileLen(strDownload)
WScript.Echo TotalSize strDownload = Dir()
Else WScript.Echo "No download filename
found." Exit Sub
```

SAP 2000 is a computational tool for Computer Aided Design. The software is compatible with 2D and 3D CAD systems like AutoCAD, EasiCAD, SolidWorks, PDM,. SAP 2000 is a fast and easy to use CAD/CAE solution. It is a comprehensive development environment and has the capability to perform any.Q: Efficiently

count and sum in most recent hour/day, MySQL I have a table of payments with columns for the date, time, amount, and payment type (e.g. credit card). My goal is to count the number of transactions in an hour per payment type (i.e. I want to record the number of credit card payments made in the last hour). I'm looking for the most efficient way to do this. I'm thinking I need to use group by hour / day / month, but am not sure where to start. A: This is not easy because the data is not all in the same column. You can get your result if you know date and time ranges for a day (or hour or even minute). Date and time are fixed, but you can get it from MySQL then. The most easy way is to make a table with the hour/day and type of transactions. Then you can run a query:
`SELECT a.date, SUM(a.type) FROM`

yourtable a GROUP BY a.hour ORDER BY a.date DESC LIMIT 1 This query finds only the most recent hour. After that you can use it. The first line is reading the tables with all hours and types. The second line of the statement is grouping all hours together, so you get for every hour the total of type type. The third line is giving you only the hour in question. The fourth line is ordering all hours by date and limiting the resultset to 1 (the newest hour). The fifth line gives you a total for every hour type. As a result you get something like this: hour type count 00 creditcard 52 01 creditcard 32 ... 23 creditcard 147 00 debitcard 147 01 debitcard 149 ... 23 debitcard 118 f678ea9f9e
